CLASS –XI (SESSION 2024-2025)

Total Marks: 100 (Theory - 50 + Practical - 50)

YOGA (SUBJECT CODE - 841) Class XI (Session 2024-25)			
	UNITS	**NO. OF HOURS for Theory and Practical**	**MAX. MARKS for Theory and Practical**
Part A	**Employability Skills**		
	Unit 1 : Communication Skills - III	13	10
	Unit 2 : Self-Management Skills - III	07	
	Unit 3 : ICT Skills - III	13	
	Unit 4 : Entrepreneurial Skills - III	10	
	Unit 5 : Green Skills - III	07	
	Total	**50**	**10**
Part B	**Subject Specific Skills**		
	Unit 1 – Introduction to Yoga and Yogic Practices - I	25	12
	Unit 2 – Introduction to Yoga Texts - I	40	12
	Unit 3 – Yoga for Health Promotion - I	40	16
	Total	**105**	**40**
Part C	**Practical Work**		
	Project	115	10
	Viva		05
	Practical File		15
	Demonstration of skill competency via Lab Activities		20
	Total	**115**	**50**
	GRAND TOTAL	**260**	**100**

PART-A: EMPLOYABILITY SKILLS

S. No.	Units	Duration in Hours
1.	Unit 1: Communication Skills-III	13
2.	Unit 2: Self-Management Skills-III	07
3.	Unit 3: Information and Communication Technology Skills-III	13
4.	Unit 4: Entrepreneurial Skills-III	10
5.	Unit 5: Green Skills-III	07
	TOTAL DURATION	**50**

Part-B – SUBJECT SPECIFIC SKILLS

- Unit 1 – Introduction to Yoga and Yogic Practices - I
- Unit 2 – Introduction to Yoga Texts - I
- Unit 3 – Yoga for Health Promotion – I

Unit 1 – Introduction to Yoga and Yogic Practices - I

- Yoga Etymology, definition ,Aim, objective and misconception text
- Yoga origin ,history and development
- Rules and regulations to be followed by yoga practitioners
- Introduction to Major schools of Yoga (Janan, Yoga Bhakti, Yoga Karma, Patanjali, Hatha)
- Introduction to yogic practices (Sukshama Vyayama, Surya Namaskar and Asanas)

Unit 2 – Introduction to Yoga Texts - I

- Introduction and study of Patanjali Yoga Sutra including memorization of selected Sutra
- Introduction and study of Bhagavad Gita including memorization of selected Slokas
- Introduction of Hata Pradpika.
- Introduction and study of Gheranda Samhita.

Unit 3 – Yoga for Health Promotion – I

- Brief introduction to human body
- Role of yoga for health promotion
- Yogic attitudes and practices
- Holistic approach of yoga towards the health and diseases
- Introduction to yoga diet and its relevance and importance in yoga Sadhana
- Dincharya and Ritucharya with respect of yogic Lifestyle

Part-B – SUBJECT SPECIFIC SKILLS

Unit 1 - Introduction to Yoga and Yogic Practices - I

The root word of Yoga

The word Yoga or Yog is derived from the Sanskrit word Yuj, Which means to connect or Union.

Meaning of Yoga:

The Meaning of Yoga at the Spiritual level:

This is a Union of Jivatama (Human Soul) with Parmatma (God/ Super consciousness) to achieve Moksha.

The Meaning of Yoga at the Practical level:

This is a Union of Body, Mind, and Soul together to perform any kind of task for a good result.

Example:

Whenever we try to read or to understand any topic, sometimes it happens that our body is present there but our mind goes out somewhere else. Because of this, we do not understand that subject or topic properly, But on the other hand when we keep our mind connected with the body, do not allow any kind of thoughts to come to the mind, so that topic is well understood on time.

Introduction to Yoga:

- Yoga is the Science of right living and it works on all aspects of the person: The Physical, Mental, Emotional and Spiritual.
- Yoga helps in balancing the Body, Mind, and Emotions and this is done through the practice of Asana, Pranayama, Mudra-Bandha, Shatkarma, and Meditation.
- For a simple person, Yoga is another form of physical exercise. By doing physical exercises, one can develop only body Muscles.

But through Yoga, one achieves the conditioning of even all the internal organs like- Heart, Brain, Spleen, Liver, Lungs, Intestines, etc. Apart from these vital organs, through yoga all the glands, like- Thyroid, Pituitary, and Penial gland of the Brain, function better.

- Yoga is a practical aid, not a religion, Yoga is an ancient art based on a harmonizing system for the development of the body, mind, and soul. The regular practice of yoga will not only lead you to a sense of peace and well-being but will also give you a feeling of being at one with nature.
- In the present time more and more people, especially Westerners are resorting to yoga to find a cure for chronic health problems and attain peace of mind. They are also curious about Knowing what exactly is Yoga and what is included in it.
- The amazing thing about Yoga is that its positive effects on the health and mind are visible over time. Another specialty of yoga is its wide choice of Asanas. Depending upon stamina and overall health, we can choose from mild Asanas and Pranayamas to high-intensity Asanas. It is a medication without the actual use of medicines. Moreover, no side effects are associated with the practice of yoga on a regular basis. All you need to know is the most appropriate Asanas according to the ability and structure of your body. Also, you need to know the right way of performing the Asanas, because any wrong attempt can cause sprains and injuries.
- There are many branches of Yoga: Ashtanga Yoga, Hatha Yoga, Jnana Yoga, Karma Yoga, Raja Yoga, Bhakti Yoga, etc. Each individual needs to find the yogic form which most suited to his or her particular personality and need.

Swami Satyananda Saraswati says:

“Yoga is not an ancient myth buried in oblivion, it is the most valuable inheritance of the present. It is the essential need of today and the culture of tomorrow”

Definitions of Yoga:

The term *Yoga* has been defined in various ways in many different Classical Indian Texts –

1. According to **"The Yoga Sutra of Patanjali** or **Yoga Darsana or Ashtanga Yoga", Sage Patanjali** defines yoga as:

("Yogascitta vṛitti nirodhah")

The sutra is a composition of four words: Yoga, Chitta, vritti, and nirodhah

Yogah- Yoga

Chitta- Consciousness

Vritti- Patterns or circular patterns

Nirodhah- Blocking/ Stopping

Definition- ***To block the patterns of consciousness is yoga****.*

Meaning- Here it has been said that while doing any work yogi should block all those thoughts or ideas which may arise in his consciousness.

2. According to **"Shrimad Bhagwat Geeta"- Lord Shri Krishna** Defines Yoga as:

("...Samatvam Yog Uchyate")

Samatva – Balanced state, **Uchyate** – Said to be

Definition- ***Be equal-minded in both success and failure. Such equanimity is called Yoga****.*

Meaning- Yoga is a balanced state, Yoga is a balanced state of the body and mind, Yoga is a balanced state of emotions, Yoga is a balanced state of thoughts and intellect, Yoga is a balanced state of behaviour. We are excited in the situation of pleasure and we become

sad when it is a negative situation. Yoga is to maintain equality of the mind in any situation. This equanimity of mind is called yoga.

3. Lord Shri Krishna Gives another Definition of Yoga as

(*"Yogah karmasu kaushalam")*

Karma- Action/ Behavior, **Kaushalam**- Skill/ Efficiency/ Perfection

Definition- Yoga is Excellence at work.

Meaning- It states that doing work with complete devotion leads to excellence at work and gives good results.

4. According to **Hathapradipika (HathaYoga), Sage Svatmarama** Defines Yoga as:

Definition- When the union of Surya nadi and Chandra nadi is flowing together in Sushumna Nadi. This union of Surya nadi, Chandra nadi and Sushumna nadi are called Yoga.

Meaning- The word Hatha has been derived from two root words "ha" and "Tha". Where "ha" refers to the Right nostril (Sun) And "Tha" refers to the Left nostril (Moon). Normally, our breath doesn't move equally from both nostrils at the same time and when the flow of breath moves in a balanced form in both the nostril and together enters the Sushumna Nadi this Union is known as Yoga.

5. In Upanishad according to "Katha Upanishad"-

When all the five senses [(Eyes (to see), Nose (to smell), Hands (to touch), Tongue (to taste), and Ears (Hearing)] become well stabilized with the soul along with the mind and the intellect also does not make any effort, that situation is called Paramgati (Yoga) by Yogis.

History of Yoga:

The yoga we know today was developed as a part of the Tantric Civilization which existed in India and all parts of the world more than

ten thousand years ago. In archaeological excavations made in the Indus Valley at Harappa and Mohenjo-Daro (now in modern Pakistan), Many statues have been found resembling Lord Shiva and Parvati performing various asanas and practicing Meditation. According to mythical tradition, Shiva is said to be the founder of yoga and Parvati, his first disciple.

Yoga arose at the beginning of human civilization when humankind first realized their spiritual potential and began to evolve techniques to develop it. The yogic science was sequentially developed by ancient sages all over the world. The knowledge of yoga has often been explained by different and difficult symbols and languages, which is why yoga seems to be covered with a sheet of mystery.

Some traditions believe that the ancient sages and mahatmas received yoga as a divine gift so that humankind could have the opportunity to realize its divine nature.

In ancient times, yoga techniques or knowledge were kept secret and were never written down or exposed to public view. They were passed on from teacher or guru to disciple by word of mouth. In this way, there was a clear understanding of their meaning and aim.

The first books to refer to yoga were the ancient Tantras and later the Vedas, which were written about the time during the rising of the Indus Valley civilization. Although these texts do not give specific practices but yoga is symbolically shown in them.

In ancient times part of yogic studies has been present in Vedas, Upanishads, and other texts but in a very difficult language and in a scattered form due to which it was not easy for anyone to understand it, and because of this slowly yoga became diminished. After that Maharishi Patanjali introduced yoga in the yoga sutra of Patanjali or Yoga Darshan in 195 sutras in a sequence by collecting and putting together all the scattered knowledge of yoga. On the basis of this, we can say that the GOD of yoga is Lord Shiva and the FATHER of Yoga is Maharishi Patanjali.

OBJECTIVE, AIM, AND MISCONCEPTIONS OF YOGA:

Objectives of yoga:

- **To lead the Aspirant *(Sadhaka)* towards the attainment of Samadhi (Shakshatkar)-**

  Yoga has several meanings, but in the Yogic context and tradition, it also means Samadhi or knowing the truth i.e. to know things as they truly are. With the diligent practice of Ashtanga Yoga, a Sadhaka or Aspirant gains the highest knowledge of Ishwara and finally attains Samadhi.

- **To attain freedom from the sorrows of life-**

  Sorrow, Suffering, and Pain are parts of our life. Knowledge regarding their origin, causes, and even categorization helps one to minimize their effect. Spiritual knowledge is the only solution to overcome these Sorrows, as with the right knowledge of Ishwara, Jeevatma, and Prakriti, one can attain freedom from all sufferings.

- **To achieve eternal happiness-**

  In order to attain ultimate eternal, everlasting happiness, one must tread or move the yogic path, the path walked by Sages as they received this wisdom from Ishwara.

- **To inspire the aspirant towards Jeevan shuddhi (purification of body, mind, and soul) and Jagat shuddhi (selfless service to the community)-**

  Every individual's first and foremost responsibility is to purify himself/herself from both physical and mental aspects which is Jeevan shuddhi (purification of body, mind, and soul). With the sincere practice of Yoga (Ashtanga yoga), a person can attain freedom from impurities and provide selfless service to society, to lead a life with a sense of responsibility, commitment, and attitude

that the whole world is one big family. This is the process of Jagat shuddhi (selfless service to the community)

- **Being Physically and Mentally fit -**

  Yoga with its multifaceted dimensions touches every aspect of an individual through its systematic and conscious process of calming down the mind, erasing the weaknesses in the mind, and building willpower as well as keeping one physically healthy.

- **Yoga performs the following functions:**

  - ✓ It gives deep relaxation and makes us energetic at the **Physical level**.
  - ✓ It increases creativity and willpower at the **Mental level**.
  - ✓ It sharpens the intellect and calms the mind down at the **Intellectual level**.
  - ✓ It makes us equal-minded in both success and failure at the **Emotional level**.
  - ✓ It makes us kind and equal-minded to everyone at the **Social level.**

MISCONCEPTIONS ABOUT YOGA

Today, yoga has gained tremendous popularity all over the world and has also been subject to many misconceptions based on the practitioner's understanding of the theory and concepts of Yoga. In this section, let us examine a few misconceptions and clarify them with wisdom and knowledge from the yogic scriptures.

1 - Yoga and Dhyana are separate:

Clarification: Maharshi Patanjali describes Yoga as Samadhi and propounds.

The Astanga yoga or Yoga with eight limbs are Yama, Niyama, Asana, Pranayama, Pratyahara, Dharana, Dhyana, and Samadhi. Therefore, Dhyana is the seventh limb of yoga, not an independent discipline.

2 - Yoga means Asana, Pranayama, Meditation, and other physical and mental activities:

Clarification: *Asana, Pranayama, Meditation,* etc. are limbs of *Astanga Yoga*, but not complete Yoga which also includes *Yama, Niyama, Pratyahara, Dharana, Dhyana, and Samadhi.*

3 - <u>One hour of Yoga is enough for the day</u>

Clarification: Yoga is not just a set of exercises, Asanas, or Pranayamas. It is a lifestyle that needs to be adopted throughout the day. So, practice the various dimensions of yoga - Yama, Niyama, Asana, Pranayama, Pratyahara, Dharana, and Dhyana and attain Samadhi/Ishwara Shakshatkar.

4 - <u>Yoga is the ultimate discovery of Hindus to the world-</u>

Clarification: All knowledge and wisdom (Jnana) in every discipline were propounded by Ishwara through Agni, Vayu, Aditya, and Angira Rishis in the four Vedas, namely Rigveda, Yajurveda, Samaveda, and Atharvaveda. The knowledge of Yoga has its origins in all of the four Vedas.The concept of Sampradaya (Religions) came into existence much later after the Vedic period. So, it can be easily concluded that Yoga does not belong to any particular religion, it is for the benefit of all.

5 - <u>Maharshi Patanjali discovered Yoga-</u>

Clarification: Yoga is from Ishwara. Various principles and practices concerned with yoga are already described in the Vedas and Upanishads. This knowledge of yoga was at its peak during the Vedic period. But, unfortunately in that period yoga was adulterated with questionable theories, Scattered form, and remained a subject of

mystery. Maharshi Patanjali was the first one to purify *yoga vidya* from all types of adulterations. He encapsulated the entire Yogavidya and presented them in one hundred and ninety-five Sutras (195) in his masterpiece, Yogasutra. Even today, Yogasutra continues to be the best book to understand and practice the eternal Yogavidya propounded by the Ishwara.

6 - Yoga is only practical, not theoretical:

Clarification: It is a widespread misconception that a yoga aspirant doesn't need to engage in theory (study of Vedas, Upanishads, and other Vedic literature). They consider Yoga as only Asana, Pranayama, and certain mind-body exercises. But, the reality is that yoga theory has a very important role in Yoga that is why Maharshi Patanjali has included Swadhyaya under Niyamas in Astanga yoga.

7 - A Yoga practitioner needs to follow a specific kind of grooming and dressing -

Clarification: A book is not judged by its cover - Just as a book is known for its content and not its beautiful cover, similarly a Yogi is characterized by his Nature, Behavior, and not his external appearance. Dressing or grooming in a specific way does not authorize someone to be known as Yogi. Keeping long hair, wearing rudraksha, maintaining an attractive beard, or dressing (in white, saffron, green, etc.) are not any benchmarks to consider someone a Yogi.

Rules and Regulations to be followed by Yoga Practitioners:

Like any other activity, Yoga also has some basic rules. These rules should follow in order to get optimum results from yoga. Some of the basic rules are stated below.

Age for Yoga-

Yoga has no age limitation. People of any age group can do yoga. Only some type of yoga is associated with age.

Ideal Place for Yoga-

It is advisable to practice Yoga in a quiet and properly ventilated room or place. We can also practice Yoga outdoors, amidst trees and flowers. Avoid practicing Yoga during colds, strong winds, and smoky or dirty atmospheres. Make sure your Yoga mat is surrounded by much space to avoid any sort of accidents while practicing Yoga poses like Shirshasana, Markatasana, Halasana, etc. Refrain from practicing under an electric fan or Air conditioner, if it is not too hot.

Ideal Clothes for Yoga-

Wear loose, light, and comfortable clothes during yoga practice. It should be ensured that clothes are covering the body appropriately as per your cultural believes. Remove your spectacles, watches, or any jewellery before starting yoga because it can harm you while doing yogasana.

Yoga Mat for Yogic practice-

Yoga mats made of natural materials, as well as folded blankets, can be used for doing Yoga. Blankets work as good insulators between

your body and the earth. We should avoid spongy or air-filled mattresses as they do not provide the required support to the spine.

Ideal Diet for Yoga -

There is no specification or dietary rule for Yoga. Eat natural food filled with nutrients. It does not require one to be vegetarian to practice Yoga. However, in the advanced level of yoga, it is recommended to lead a vegetarian life. It is advised to fill half of the stomach with food, one-quarter with water, and to keep the remaining quarter empty. This practice keeps the body fit and active.

Condition of Stomach-

It is highly recommended that your stomach is empty while doing yoga that is why Yoga is normally practiced during the morning hours after emptying the stomach. If that is not possible, then at least give a 3- 4 hour gap after your last meal for doing yoga.

In the morning create a schedule of waking up at a fixed time and empty your bowl before doing yoga. After some time, it would become natural, and you would need not force your body for that.

Way of breathing-

During Yoga, you should breathe through your nose, not from the mouth. It is very important in order to get the full benefits of Yoga.

Body Condition While Doing Yoga-

While doing Yoga, one's body should be free from fever or any other disease. If he/ she is suffering from any disease, he/she should consult his /her doctor before practicing Yoga. While doing Yoga one's body should be relaxed and calm.

Asanas in Inverted Position-

The female practitioner should avoid doing any type of inverted Asanas, such as Shirshasana, Sarvangasana, Uttanpadasana, etc during Periods or Menstrual cycle. This can harm their body.

Pain in Body while Doing Yoga-

Initially, the body tends to pain since it would be in a stiff condition. But if the pain is unbearable you should immediately stop yoga and inform your instructor about that.

MAJOR SCHOOL OF YOGA/ STREAMS OF YOGA/ BRANCHES OF YOGA:

There are many theories associated with Yoga. It is mentioned in Rig Veda, and its evidence was found in the oldest civilization of Indus-Saraswati, which is considered to be more than 5000 years old (3000 B.C.), it means Yoga is older than 5000 years. It was invented by 'Rishi Munis' for doing meditation, but apart from that, it has a very good effect on the body. During the journey of more than 5000 years, Yoga evolved in many forms. There are different methods or schools of yoga but has the same Goal that is to achieve moksha.

Moksha:

The stage of moksha is attained when you become free from all your karmas i.e, freedom from all attachment of worldly atoms. Not a single atom remains attached to your Soul.

Some main methods or school of yoga are:

1- Patanjali Yoga

2- Hath Yoga

3- Raja Yoga

4- Jnana Yoga

5- Karma Yoga

6- Bhakti Yoga

1. Patanjali Yoga:

The entire range of yoga is divided into two parts-

1-Bahiranga Yoga (External) - *Yama, Niyama, Asana, Pranayama and Pratyahara.*

2-Antaranga Yoga (Internal) - *Dharana, Dhyana and Samadhi.*

Bahiranga Yoga:

Bahiranga is a Sanskrit term meaning “external,” “outer” or “outside.” Bahiranga yoga, therefore, refers to external yoga or the outer path of yoga. The first five

Limbs of eight limbs of yoga are Yama, Niyama, Asana, Pranayama and Pratyahara constitutes Bahiranga Yoga.

Antaranga Yoga:

Antaranga is a Sanskrit term meaning “internal,” “inner” or “inside.” Antaranga yoga, therefore, refers to the inner path of yoga. The last three limbs of eight limbs of yoga are Dharana, Dhyana and Samadhi constitutes Antaranga Yoga.

These yogic practices together are referred to as Ataranga sadhana (spiritual practice or spiritual discipline).

2. Hatha Yoga:

Normally people understand Hatha yoga means the practice of yogic postures forcefully, whether it takes a lot of energy or makes the practitioner exhausted but it is definitely not the same. The word 'Hatha' has been used in yogic texts and ancient literature in a different meaning.

In the yogic text, Hatha yoga has been defined as –

The word 'Hatha' is made up of two Bija Mantra(Root words): 'Ha' and 'Tha' ; where 'Ha' represents Sun or Pingala Nadi i.e., Right nostril and Tha' represents Moon or Ida Nadi i.e, Left nostril. Basically the union of these two Nadies is called Hatha Yoga.

When Ida and Pingala unites together, the Prana(breath) starts flowing into Sushumna and the dormant power Kundalini which is lying in the Muladhara Chakra, rises and enters Sushumna and passing through

all the six chakras reaches the highest peak Brahmarandhra or Sahasrara chakra and attain the oneness. This is the union of Sakti and Siva or Atman and Parmatman, this process destroys the ignorance of the aspirant and illuminates his heart and soul. Thus the process of this union is called Yoga. This is the real meaning of Hatha Yoga.

There are various Texts of Hatha Yoga. Among them, Hatha Pradipika by Swatmarama and Gheranda Samhita by Maharsi Gheranda are more important.

According to the text "Hatha Yoga Pradipika" which was written by the Sage Swatmarama the evolution of Hatha Yoga includes 4 steps in, sequentially:

1- Asana (15),

2- Pranayama (8),

3- Mudra-Bandha (10)

4- Nadanusandhana

Whereas, Gheranda Samhita is another text of Hatha yoga which was written by the Sage Gheranda, explains the process in seven steps:

1- Shatkarma (6)

2- Asana (32)

3- Mudra-Bandh (25)

4- Pratyahara

5- Pranayama (8)

6- Dhyana

7- Samadhi

3. Raja Yoga

The word Raja Yoga is found in many of the Upanishads (108). It may be regarded as the master of all the yogic practices. All the yogic practices lead to Samadhi, but the specialty of this path is that it starts from Samadhi. Hence the Samadhi comes in every path, thus it has been considered to be the complementary practice of yoga and the great path of yoga.

The importance of Raja Yoga has been accepted very widely. The great hatha Yogi Swatmarama also says in hatha pradeepika as:

Kevalam Rajyogaya Hatha-vidyopni-disyate

Meaning- The lesson of Hatha yoga is only for the attainment of Raja Yoga.

To start sadhana from raja yoga it must be start from hatha yogic practices like shatkarma, asana, pranayama, mudra-bandh, nadanusandhan etc...So that, the aspirant can able to comfortable in raja yoga meditation practices. It means hatha yoga without raja yoga and raja yoga without hatha yoga are incomplete so both are deeply interconnected with each other.

The practitioner of Raj Yoga has been divided into three kinds:

1- Uttam- The advance practitioner
2- Madhyam- Medium practitioner
3- Adham- Beginner practitioners

(This categorisation also differentiates the practice of the individual)

1- Uttam Practitioner- The first type is Uttam or the advanced practitioner, the Uttam type of practitioner needs a special type of package for the attainment that is Abhyas and Vairagya.

Sage Patanjali has also given the same instruction to them in his yoga Sutra, that there are two method of stopping the flow of the chitta vritti that is, two methods have been told to stop the pattern of consciousness-

first is Abhyasa or continuous practice and the second one is Vairagya or detachment from all the Raga and Dwesa (liking and disliking)

2- Madhyam Practitoner- The second type of practitioner madhyam has been instructed to practice Kriya yoga. This type of aspirant needs a few more hard practices as they also have past life practice but in lower form. Thus for them Patanjali describes kriya yoga as:

Shlok- *Tapah Swadhayayasyeswarpranidhanani kryayogah.PYS 2/1*

Tapa, Swadhayaya and Iswarpranidhana are kriya yoga Meaning- Tapa – Penance or more and more practice,

Swadhyaya (Self-study) and

Iswarpranidhan (Faith in god) or Devoted to god

These three things lead the aspirant to attain the Samadhi.

3- Adham Practitioner- The beginners or Adham practitioner those who did not start the Sadhana or practice yet, has been suggested to adopt Astanga Yoga (eightfold path). Sage, Patanjali says in his Yoga Sutra that- Yama, Niyama, Asana, Pranayama, Pratyahara, Dharana, Dhyan and Samadhi are the steps of Astanga Yoga. They need to practice all the steps as their body and mind both need a preparation and suppleness for Samadhi.

The great sage, Patanjali was a follower of Raj Yoga. In Raj Yoga, Yoga is practiced to gain mastery over the mind through willpower there are further two branches under Raj Yoga:

1- Bahiranga Yoga,

2- Antaranga Yoga -------(see previous in Patanjali Yoga)

Only through the practice of Raj Yoga, Atman becomes able to know the real self.

4. Jnana Yoga:

The word Jnana literary means knowledge and wisdom, thus it is known as Yoga of Knowledge or wisdom.

What is that knowledge? It is understanding or experience of the self. To know the self through knowledge or wisdom is known as Jnana Yoga.

This path of yoga deals directly with the highest of all human desires - the desire to know the Truth - and it gives an explanation of what truth means and shows the practical way of realizing it. Truth is that which is not the subject to change, death, decay and destruction. It never changes at any time; it was never born, and will never die. It is self-existent and does not depend on anything.

Jnana Yoga is the science that provides a systematized and organized method of study in order to fulfill this desire to know the Truth. The truth or reality is only Atman (soul), the knowledge of self and which is ultimate.

There are three phases in Jnana yoga:

1. Sharavana, the first exposure to knowledge in any form (reading a book, listening to a lecture, watching a video).

2. Manana, revisiting the knowledge for further understanding.

3. Nididhyasana, the phase of experimentation.

In Jnana yoga, the ultimate aim is to understand the reality of Atma (soul) and the ability to differentiate it from the body. A person truly established in the path of Jnana yoga becomes free from all worldly desires and achieves contentment. Though all paths of yoga seem to be completely different from each other, but they lead to the same goal of self-realization, and the union of the individual with the universal self.

5. Karma Yoga

The Bhagvad gita remains the main source for the conceptual basis of karma yoga; it was later elaborated by Swami Vivekananda. This path emphasizes on performing actions with detachment without worrying about the results.

The word Karma comes from Sanskrit root '**Kri**' which means to do. Karma literary means action, which everyone performs in this world,

whether consciously or unconsciously. The human beings have a natural tendency to perform something.

The Bhagvad gita says:

No person can stop his activity at any time even for a moment, because the entire humanity has been forced by the nature to perform action.

Actions (Karma) are categorized as:

Tamasik karma - These are reason for the binding, violent and is a result of state of delusion/Illusion, lethargic and confusion etc.

Rajasik karma - When performed with craving for desires, with egoism and a lot of effort, known as rajasik karma.

Sattvik - When it is free from attachment and done without love or hatred.

Karma yoga is a path in which aspirant is not required to take sannyas or to practice in a forest, but he/she can attain liberation while living in a family relationships, while renouncing the desire for the results of his duty deeds.

6. Bhakti Yoga

Bhakti Yoga is the easiest and natural way for God-realization. It is deeply concerned with our life. This path of devotion is for everyone. Anybody can practice it even the vilest man can start and gradually improvement will take place. The Narada Bhakti Sutra defines Bhakti as:

Bhakti is the supreme love for God. The object of real devotion is only God and nothing else. This love should be pure and powerful; there should not be any kind of selfish idea associated with it. Therefore one should not expect anything like wealth, prosperity or any worldly object from God - not even the happiness.

There are nine forms of bhakti which also known as NAVDA BHAKTI-

1. Shravanam Bhakti – Hearing the names and glories of the God.

Shravanam generally means hearing about Leelas or the greatness of God with great interest. So if you are a person with great interest in Ramayan, Mahabharat, Puranas etc, this is the best way for you. The easy way for Shravanam bhagti is Satsang (getting good devotee as friend). Because if you are with a person who is a great devotee, you can listen only about God, as the devotee can only talk about the glory of God. So by listening to him you are doing Shravanam bhagti.

2. <u>Keertanam Bhakti</u> – Chanting the names or glories of God-

Keertanam is considered as the best way of coming close to God in Kaliyuga. Keerthanam in an easy way means saying the Lord name again and again. Like saying Rama Rama Rama or Jai shri krishna etc. It is considered as an easy way because you can do this any time. For example when you are traveling in Bus or Train you can keep saying your god name or even when you are doing some work like cleaning your room you can keep saying god name. You can also choose a Bhajan and keep singing it. It is also considered as Keertanam.

3. <u>Smaranam Bhakti</u>– Remembering the God-

Smaranam is the constant remembrance of God. We can consider Smaranam as the advanced stage or combination of Shravanam and Keertanam. For example, you have listened about Lord Srirama for about 30 min or 1 hour or if you have done a bhajan of Lord Krishna. So after that if you keep remembering the things which you have heard about Lord Sriraman or Lord Shrikrishna it is called Smaranam. Doing Japa, meditation on God …will come under Smaranam. Perfect example of Smarana Bhakthi is Bhakta Prahalad(devotee of Lord Vishnu).

4. <u>Padasevanam – Serving the God's Feet-</u>

Padasevanam is the worship of god by concentrating upon his feet. If we are approaching the feet of any one, it represents that we are keeping our attitude a side and asking them to take care of us. By doing padapooja you are saying god that you are keeping your life at his feet or we can say Pada-sevanam means engaging oneself in serving the lotus feet of the god according to the time and circumstances.

Example of this kind of Bhakti is our mother goddess Lakshmi, who is seen in constant worship of Lord Vishnu's lotus feet.

5). Archana Bhakti- Worshipping the god as per the Scriptures.

Archana consists of the physical worship of God in the form of an idol or statue etc, using the correct rituals as prescribed in the scriptures. Archana can be done by offering flowers, fruits, leaves, food, or even water to god.

6). Vandana- Prostrating before god.

Vandana means prostrating oneself before the god.

Vandanam is a form of Bhakti where you will recognize that all the things you have, are given by God and you express your gratitude to God. For example you got good food to eat, so before eating, you say thanks to God. So Vandana Bhakti means saying thanks to god for all the things he has given.

7. Daasyam - Serving the god as his servant.

In Daasya bhakti you consider god as your Swami, father, mother and everything to you. You consider your-self as his Son /Servant. So what all you do, you will do for the happiness of your Swami. Just as Hanuman ji had devotion for Shree Rama.

8. Sakhyam Bhakti– Developing friendship with God

In sakhya bhakti you consider God as your friend. So in this form of bhakti, you will share all your happiness, sorrows and every moment of your life with God. You always feel that he is with you in every point of your life. Best example of sakhya bhakti is as Arjun taking suggestions from Lord Krishna.

9. Aatma Nivedanam – Totally offering oneself to the god.

In Aatma Nivedanam you should offer **surrender** everything to God including your body, mind and soul. You should not have any personal and independent existence. You should leave all your karmas, dharmas and offer yourself to God.

INTRODUCTION TO YOGIC PRACTICES *(SUKSHAMA VYAYAMA, SURYA NAMASKAR AND ASANAS)*

Sukshama Vyayama:

There are various yogic practices that have an impact on different parts of the body. Sukshma Vyayama is one of it. Sukshma Vyayama is a system of yogic practices which loosens your Joints and removes energy blockages. This system has a strong purifying effect thus, boosting the body's energy. Yogic Sukshma Vyayamas (Loosening and strengthening practices) are safe, rhythmic, repetitive stretching movements synchronized with breathing. These practices mobilize the joints and strengthen the joints and muscles. The simple, gentle joint movements are very useful to improve blood supply to the different parts of joints like cartilage, ligaments, etc. These joint movements are very significant if performed early morning. The most important and special fact of Yogic Sukshma Vyayama is that every body part (muscle, joint, and organ) is taken care of.

Features of Sukhsma Vyayama:

The main features or components of Sukshma Vyayama are:

i. Breathe awareness.

ii. Concentrating on the specific joints one wants to repair or strengthen.

iii. Synchronization of inhalation and exhalation with the movement of that joints.

Surya Namaskar:

Surya means 'Sun' and Namaskara means 'Salutation'. It is basically saluting the sun using various postures.

Surya Namaskara is a series of 12 physical postures. These postures stretch various muscles and the spinal column resulting in the flexibility of the whole body. This is usually done facing the sun both at sunrise and sunset.

Asanas:

Sage Gheranda says- Adapting or following the normal physical postures of all the species of animals in this world is called asana. Lord Shiva has described eighty-four lakh (84,00,000) asanas. Out of those, eighty-four are important, and of these, Thirty-two (32) have been considered essential for the mortal world.

Meaning- Asana means a state of being in which one can remain physically and mentally steady, calm, quiet, and comfortable.

Unit 2 – Introduction to Yoga Texts – I

INTRODUCTION AND STUDY OF PATANJALI YOGA SUTRA:

Patanjali yoga or Yoga darshana or Astang yoga. This is a scripture of 195 sutras (verses) written by Sage Patanjali. In English this text can be called 'Verses on Yoga', but actually the word sutra means 'thread'. The word sutra implies that the written words carry underlying (the main) continuous thoughts; the various ideas connect together like the beads on a mala to form a complete philosophy.

This scripture is regarded as the most precise and scientific text ever written on yoga. It is divided into four (4) chapters:

1. Samadhi Pada- (Pada- Chapter/Stage/Way) -

The chapter on samadhi consists of **51 sutra**/verses. This chapter is concerned with the following subjects:

Definition of yoga, Purpose of yoga, Vritti (mental modification/patterns), Practice and detachment, Ishwara (pure consciousness), Aum, Obstacles to progress, Methods of harmonizing the mind, etc.

2. Sadhana Pada-

The chapter on sadhana consists of **55 sutra**/verses. This chapter is concerned with the following subjects:

Klesha (basic tensions of life), Removal of klesha, Purpose of destroying klesha, The eight limbs of Patanjali yoga: Yama (social code), Niyama (personal code), Method of controlling negative thoughts, Results of perfecting Yama and niyama, Asana (sitting position), Pranayama (control of prana), Pratyahara (sense withdrawal/non-attachment), etc.

3. Vibhooti Pada-

The chapter on vibhooti consists of **55 sutras**. It discusses the following subjects:

Dharana (concentration), Dhyana (meditation), Samadhi (total absorption), etc.

4. Kaivalya Pada-

The chapter on kaivalya consists of **34 sutras**. It discusses the following subjects:

Means of attaining psychic powers, Karma, Theory of perception (realization), what is Kaivalya and the path to kaivalya, etc.

All the verses are in a methodical sequence; each has its place for a specific purpose. Sage Patanjali moves from one verse to the next, from one chapter to the next, with faultless logic.

Specifically, Patanjali yoga is that system which consists of eight stages: yama, niyama, asana, pranayama, pratyahara, dharana, dhyana and samadhi. It is therefore widely called Ashtanga yoga, the yoga of eight stages.

One tradition says that Hiranyagarbha (Brahma) formulated the Yoga Sutras. Maybe, but for the sake of simplicity we can say that he formulated them through the agency of a man called Patanjali.

INTRODUCTION AND STUDY OF BHAGAVAD GITA INCLUDING MEMORIZATION OF SELECTED SLOKAS:

The Bhagavad Gita is a Sanskrit text derived from the Mahabharata epic. The Bhagavad Gita includes eighteen (18) chapters. The content is in the form of a discussion between Lord Krishna and Arjuna that happened in the middle of the war zone of Kurukshetra. Reacting to Arjuna's confusion and puzzles, Krishna explains to Arjuna his duties as a fighter and comments on different Yogic and Vedantic philosophies with examples. The Bhagavad Gita is admired as sacred by ancient Indian traditions. It is commonly known as The Gita.

The Bhagavad Gita is also a Yogic scripture, it includes the knowledge of Indian religious philosophy. Those who cannot read Vedas (4), Upanishads (108), etc. texts, can get the full benefit by reading the Gita. The Gita is a book that affects various aspects of life. In difficult times of life, The Gita guides a person. The Gita has received worldwide acceptance.

It has been translated into 75 languages around the world. In present times, man is getting trapped in confusion, lies, and superstition. In the race for industrial progress, a person is becoming distant from his own reality. It has a direct impact on his health.

There are many definitions of yoga in the Bhagavad Gita some of the popular ones are:

Bhagavad Gita says *"…Samatvam Yoga Uchate"* (Gita 2.48)

The practice of equanimity of mind for any circumstance without any hatred or greed. Treating all pain or pleasure in the same way with love. This type of practice helps one to remain mind constantly calm. When the mind is peaceful, the body functions properly. When equanimity is practiced, fear of disease or fear of death will be thrown away from the mind, the main causes of disease like jealousy, hatred, anger, etc. will disappear automatically and the mind gets quiet. Hence the practice of Yoga helps to cure and prevent any disease and keeps us healthy.

Bhagavad Gita says *"Yogah Karmashu Kaushalam:"* (Gita 2.50)

Yoga is a Skill in action. The Skill is in maintaining relaxation and awareness in action. Relaxed action is the process. Regular Planning in action is an outcome. Thus Yoga is a skill in action and the ability to stay mastery over the mind. “Yoga is the art and science of healthy living”

Note: 2.48 i.e., Chapter 2, Verse 48

2.50 i.e., Chapter 2, Verse 50

INTRODUCTION OF HATHA PRADIPIKA

There are various Texts of Hatha Yoga, among them Hatha Pradipika by Sage Swatmarama is one of the most important texts. Sage Swatmarama mentions four components of Hatha yoga are as-

- Asana(15),
- Pranayama(8),
- Mudra-Bandha (10)
- Nadanusandhana

1: Asana (Posture) – Asana, being the first component of Hatha yoga, Asana brings mental as well as physical steadiness, health, and a feeling of lightness. There are 15 Asanas mentioned in Hatha pradipika are as:

(Svastikasana, Gomukhasana,Virasana, Kurmasana, Kukkutasana, Uttanakurmasana, Dhanurasana, Matsyendrasana, Pascimatanasana, Mayurasana, Shavasana, Siddhasana, Padmasana, Simhasana, Bhadrasana)

2: Pranayama - Pranayama occupies second place in Hatha yoga, Pranayama, which literally means stretching or expansion of prana and involves breath control. There are 8 pranayamas mentioned in Hathpradipika are as:

(Surya Bhedana, Ujjayi, Shitkari, Shitali, Bhastrika, Bhramari, Murcha and Plavini)

3: Mudras and Bandhas (10) - They are practices associated with pranayama. Mudras and Bandhas are the practices for certain semi-voluntary and involuntary muscles in the body. These practices bring about voluntary control and tone up the internal organs such as the brain, heart, kidneys, lungs, etc.

There are three classic Bandhas- Mula bandha, Uddiyan bandha, and Jalandhara bandha. When practiced together they are called tri-bandha or Maha bandha, also mentioned some Mudra like- Maha Mudra, Khechari, and Viparitakarni Mudra are common among them.

4: Nadanusandhana- The word “Nadanusandhana” is made up of two words “Nada” and “Anusandhana” in which nada means sound and anusandhana means “Aiming at”, or “Attending to”. Therefore, the word nadanusandhana indicates the fixing of one's attention upon the inner sound.

Sage Swatmarama explains the aim of hatha yoga in Hatha pradeepika as the lesson of hatha yoga is only for the attainment of Raja Yoga or the ultimate reality. And again the same thing is repeated at the end of the text that all the practices and clues given in hatha yoga are only for the attainment of Raja yoga.

INTRODUCTION AND STUDY OF GHERANDA SAMHITA:

Gheranda Samhita is a Hatha yogic text by Sage Gheranda. The yoga taught in Gheranda Samhita is known as Saptanga yoga or Seven limbs of yoga. Sage Gheranda gives his seven limbs of yoga another name: Ghatastha yoga. Ghatastha yoga means yoga based on the body. Ghata means body; it also means pot or pitcher. He has observed the body in the form of a mud pot, which is given a shape with the help of matter and contains whatever God has filled it with: Senses, mind, knowledge, wisdom, ego, etc- all of which makes it one's pitcher.

Seven limbs are:

1- Shatkarma (6) - In Gheranda Samhita, the cleansing practices for the body, called shatkarma, are discussed first. The main ones are:

I. Neti (nasal cleansing),

II. Dhauti (Food pipe and stomach cleansing),

III. Basti (cleansing the large intestine),

IV. Nauli (massaging and strengthening the abdominal muscles and organs),

V. Kapalbhati (a type of pranayama),

VI. Trataka (a method of concentrating the mind).

2- Asana (32) - Sage Gheranda mainly describes postures which make the body strong and stable, there are 32 asanas mentioned in Gheranda Samhita Among them Padmasana, Siddhasana, Vajrasana, Paschimottanasana are common.

3- Mudras-Bandhas (25)- Sage Gheranda discusses total twenty-five mudras-bandhas and with which the flow of prana inside the body can be controlled. He believes that prana or energy produces heat inside the body. In higher sadhana, when a person sits in an asana for long durations, the generates heat or the body temperature only drops, if the prana shakti is not controlled inside the body, so that the energy is

lost. Sage Gheranda describes the mudras-bandhas so that one can retain the prana inside the body.

4- Pratyahara- After mudras, pratyahara is described as the fourth dimension. First body is purified and disorders removed. Next, stability in asana is achieved. The prana is then balanced and controlled through mudras-bundhas. In Pratyahara, the senses are controlled and the mind becomes internalized in a natural way, it helps in reducing attachment to things.

5- Pranayama (8)- Sage Gheranda includes pranayama as the fifth dimension. Generally in the practice of pranayama, the incoming and outgoing breaths are counted and the duration of inhalation and exhalation is equalized. Sage Gheranda follows this tradition, but mantras are used instead of counting. All the pranayama practices mentioned in Gheranda Samhita are practiced with mantras. By including mantras, Sage Gheranda makes the practice of pranayama more powerful.

Through the practice of Pranayama body becomes light weighted, all the Nadies become purified and the mind becomes stable.

6- Dhyana- Dhyana or meditation is included as the sixth dimension. When the prana is awakened and controlled and the mind is internalized. Meditation arises by itself. Sage Gheranda mentions three types of meditation: Bahiranga dhyana(external meditation), Antaranga dhyana(inner meditation), and Ekachitta dhyana(One-pointed meditation). The practice of Dhyana (meditation) leads to self-realization.

7- Samadhi- Now as we know the Practice of Dhyan (meditation) leads self-realizationion and through the regular practice of that Dhyan the mind becomes detached and it is the stage of Samadhi. The aspirant can attend the Moksha or Kaivalya.

Unit 3 – Yoga for Health Promotion – I

Introduction to Human Body:

The human body consists of three distinct/separate parts, namely the head, trunk, and extremities. The hands are the upper extremities and the legs are the lower extremities. The trunk is differentiated into the chest part (thoracic) and the abdominal part. These two parts are separated internally by a muscular curtain called the diaphragm. The human body is well organized for its different vital functions. Such functional organization of the organs in the body is known as a system. For example, the digestive system for the function of digestion, the respiratory system for the function of exchange of gases between the organism and the atmosphere, etc. These systems are interdependent on each other. The total function of the body depends on the integration of these systems. A system is constructed of some parts which are grouped together for a specific function. These parts work together in perfect coordination. For example, the mouth, teeth, stomach, liver, intestine, pancreas, and colon work together as a digestive system to provide nutrition to the body.

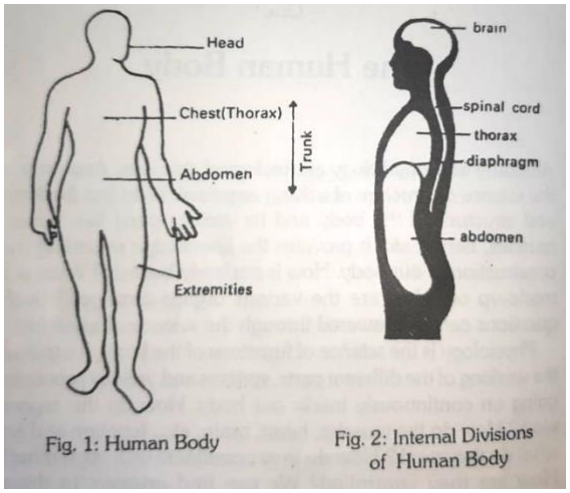

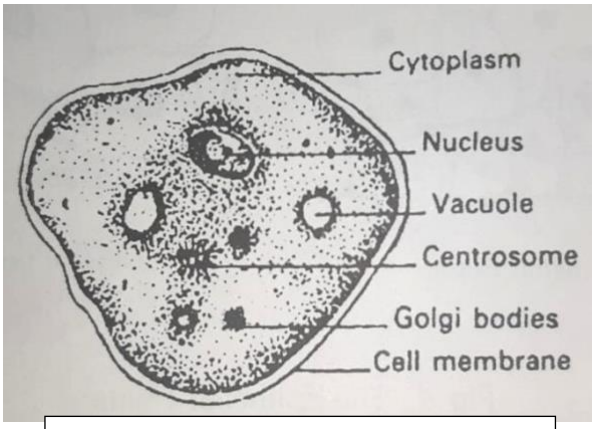

Fig. 1: Human Body

Fig. 2: Internal Divisions of Human Body

Every organ is composed of four specific tissues. These tissues are organized in various proportions and patterns. Tissues are made up of a group of specialized cells. For example, muscular tissue is composed of muscle fibers, which are nothing but modified cells specialized for contraction and production of force. Nerve tissue is made of nerve fibers, which are the modified cells to conduct nerve impulses.

The Cell-

Each and every part of our body is composed of tiny microscopic units called the 'cell'. The cell is the structural and functional unit of the body. Cells have different shapes and sizes according to their nature of work.

The Animal/ Human Cell

The cell can be divided into three main parts-

1. *Cell membrane*- Every cell is covered and well protected by a very thin wall called the plasma membrane or cell membrane. Which is transparent and semipermeable, it can handle and control in and out stuffs like water, oxygen, carbon dioxide, etc.
2. *Cytoplasm*- A living stuff called Cytoplasm is liquid or the inner jelly part of the cell where all living activities like Mitochondria (powerhouse), Ribosomes (protein factory), lysosomes (cells digestion or suicide bags), Golgi apparatus (proteins transportation), etc. exist.
3. *Nucleus*- A highly specialized structure in the center of the cell called the nucleus, which controls all cellular activities. Thus the cell can absorb the nourishment, transport the oxygen, expel the waste material, respond to different situations, and grow and reproduce a cell of its own kind, just like an organism.

THE TISSUES:

Cells are highly organized units but they do not function in isolation. They work together in a group of similar cells forming a tissue. Every tissue has its specialized function to perform. Tissues of our body are classified into four principal types according to their structure and function. These are,

(1) Epithelial tissue, (2) Connective tissue, (3) Muscular tissue, and (4) Nervous tissue.

1. Epithelial tissue- It covers the body surface and forms the glands. It forms an external layer of the skin and internal lining. The main functions of this tissue are secretion, protection, absorption, and excretion.

2. Connective tissue- It includes the blood cells, cartilage, and bones. The major functions of connective tissue are to connect, anchor, and support the other tissues of the body and to form the structural framework of the body.

3. Muscular tissue- It is responsible for the movements of the body and parts. This is because of its characteristic function of contraction.

Mainly three types of muscle fibers are constructed from this tissue.

1. Cardiac muscle, forming the walls of the heart,

2. Smooth muscles of internal parts like the intestine, and

3. Striated muscles or skeletal muscles like biceps. It is attached to the bones with the help of tendons.

4. Nervous tissue- It constructs the whole nervous system. It initiates and transmits nerve impulses that coordinate the body's activities. It establishes the relationship between the body and its surrounding environment.

ORGANS:

Different kinds of tissues join together to form a higher level of an organization called the organ. The shape and size of organs can be recognized. Each organ has a complex structure and it performs a specific function for the body. For example, the stomach is composed of smooth muscles, glandular epithelial tissue, blood vessels, and nervous tissue and performs the function of digestion. The outer layer of the stomach is made up of connective tissue and epithelium that protects the stomach and reduces the friction when the stomach moves and rubs against other organs. The muscle tissue layers of the

stomach contract to mix the food and pass it on to the intestine. The inner layer of epithelium produces mucous, acid, and enzymes. Some examples of organs are the liver, heart, brain, lungs, uterus (in women), urinary bladder, etc.

SYSTEMS:

A system is an association of parts that have a common function. There are some main systems are, the skeletal system, muscular system, digestive system, respiratory system, nervous system, circulatory system, urinary system, endocrine system, reproductive system, immune system, etc., All of them coordinate with each other and are interdependent on each other in such a way that there exists no line of separation in respect of their structure and function. Some organs even belong to more than one system. For example, the liver is a part of the digestive as well as the excretory system. These systems help the organisms to exchange molecules across their body surface between the internal and external environments. For example, the respiratory system exchanges oxygen and carbon dioxide between the air and the blood. All these systems together constitute the body of a living organism.

ROLE OF YOGA FOR HEALTH PROMOTION OR HEALTH AND FITNESS:

Yoga takes place main role in three areas that are:

1. **Physical**
2. **Psychological and**
3. **Spiritual**

PHYSICAL:

- **Flexibility:** Yoga helps the body to become more flexible, bringing a greater range of motion to muscles and joints, and flexibility in the neck, shoulders, back, and legs that is the whole body.
- **Strength:** Many yoga asanas support the weight of own body in new ways, including balancing on one leg (such as in Tree Pose) or supporting with arms increases strength.
- **Better Breathing:** Most of us breathe very shallowly into the lungs and don't give much thought to how we breathe. Yoga breathing exercises, called Pranayama, focus the attention on the breath and improve lungs capacity and posture, and harmonize body and mind which benefits the entire body. Certain types of breath can also help clear the nasal passages and even calm the central nervous system, which has both physical and mental benefits.
- **Disease Eliminator:** Yoga has the power to prevent and eliminate various chronic health problems in women similar to men.
- **Heart Disease:** With less stress and blood pressure chances of cardiovascular diseases are prevented. Increasing blood circulation and fat burning results in lowering cholesterol.

- **Metabolism:** Yoga helps to stay healthy by balancing metabolism results by controlling hunger and weight.
- **Pain Prevention:** Increased flexibility and strength can help prevent the various instances of back pain, chronic pain, and neck pain can be reduced with yoga practices.
- **Blood circulation:** Yoga asanas can help improve circulation and eliminate toxic waste substances from the body.

PSYCHOLOGICAL:

- **Mental Calmness:** Yoga practices gives mental peace because while doing asanas or pranayama our whole concentration remains on the activity we are performing, which reduces unwanted thoughts in the mind and results in calmness to the mind.
- **Stress Reduction:** Physical activity is good for relieving stress, and this is particularly true of yoga. Yoga controls breathing, which reduces anxiety. It also clears all the negative feelings and thoughts from the mind leading to a reduction in depression.
- **Concentration:** Yoga increases concentration and motivation in quick time. This is why humans from all aspects of life practice yoga since better concentration can result in better focus on life and profession.
- **Memory:** Yoga stimulates better blood circulation, especially to the brain, which reduces stress and improves concentration leading to better memory.

SPIRITUAL:

- **Inner Connection:** Yoga can help to create a bond, a relation between bodies and mind so that we can concentrate our inner body parts and feel the inner world that we have and feel the inner sound that we called as “Nadanusandhana”.

- **Inner Peace:** Yoga is the only method known to us for better and quicker inner peace. The inner peace generated increases and improves our capability in making effective decisions even in serious circumstances.
- **Purpose of Life:** Yoga is that type of effective method that has numerous benefits, psychologically and physically apart from allowing us to attain inner. It helps to find the purpose of life and secrets to a healthy long life.
- **Knowing your true nature:** When we practice yoga spiritually, we are able to know our true nature, that our body is mortal (damageable and has to be destroyed one day but our real nature will live, which is called Aatma tatwa (self-element), and that is our real form.

OTHER ROLES OF YOGA IN HEALTH AND FITNESS-

- Surya Namaskar is a complete body exercise. It keeps all internal organs, the stomach, intestines, pancreas, spleen, heart, lungs, etc. healthy and strong. Also, muscles of external body parts, chest, shoulders, hands, thighs, and legs become healthy and strong.
- It makes the spine and waist flexible by removing disorders. It improves blood circulation in the body which removes skin diseases.
- There are the best twelve steps of Surya namaskar yoga positions in sequence to burn calories, weight loss, and complete health and fitness.

YOGIC ATTITUDES AND PRACTICES:

Yogic Attitude:

The Yogic attitude makes us learn to face both the pleasurable, and the un-pleasurable events, with the same detachment. In fact, by this attitude, we can utilize painful events to develop greater inner strength.

For example, if you find that you are getting into a stressful situation, you do not panic. You use this opportunity to make your body healthy and strong, and also develop a healthy attitude of mind.

With Yogic attitude, you will find that with the change in your perspective, you work more efficiently in whatever you do, your decision making is better, and the prospects of all-round growth is begin to look brighter in your working life. Then, you can make stress as a challenge. If you face stress as a challenge, you are able to handle it through Yoga training, and your changed perspective on life.

PRACTICES OF YOGA:

Patanjali Ashtanga Yoga: [II Chapter, 29 Sutra…..III Chapter, 3 Sutra]

Ashtanaga Yoga is a mode of Yoga which consist of Eight Limbs or Steps i.e. Yama, Niyama, Asana, Pranayama, Pratyahara, Dharna, Dhyana, Samadhi have been found to control mental modification thereby helping in attaining good health.

The eight limbs, or steps to yoga, are as follows:

1- Yama (Improves external behaviour toward the society): The yamas are guidelines for how to interact with the outside world at a social level. Yamas simply improve a person's external behavior.

The five **Yamas** are:

Ahimsa (non-violence),

Satya (truthfulness),

Asteya (non-stealing,

Brahmacharya (abstinence),

Aparigraha (non-hoarding).

The practicing of Yama will help in developing peace and harmony in society.

2- Niyamas (Improves internal behaviour or self-discipline):

The niyamas are guidelines for self-discipline.

According to Patanjali, The five Niyamas are:

Shoucha (cleanliness),

Santosha (satisfaction),

Tapas (penance),

Swadhyaya (the study of the scriptures and self-study),

Ishwara pranidhana (surrender to God)

These are the five Niyamas that provide a sense of discipline in a person's life.

3- Asana (Posture): According to Patanjali, Asana is the sitting posture that should be steady and comfortable so the yogi can sit and meditate for long periods of time.

4- Pranayama (Breath-control): Pranayama, which literally means stretching or expansion of prana, involves breath control, and helps train and prepare the mind for Dharana (concentration).

5- Pratyahara (sense withdrawal): Through pratyahara one gains the ability to withdraw the senses from their objects thus achieving perfect control over the senses. The pratyahara thus helps in menthe tal and spiritual health of an individual.

6- Dharana (concentration/focus): Dharana involves focusing the mind on a single object of concentration for long periods of time. Thus it is beneficial for psychological and spiritual growth.

7- Dhyana (meditation): When there is an uninterrupted flow of the mind toward the object of focus, the yogi enters the state of meditation.

The practice of Dhyana promotes good health, happiness, and harmony in life.

8- Samadhi (total absorption): Finally when even the self-awareness of the mind disappears, and only the object of meditation shines through, it is called the state of Samadhi. This leads to enlightening the state of self-realization.

Mudras-Bandhas (10), Shatkarmas (6), etc are also important practices which also practiced in yoga.

- **Bandhas and Mudras** are practices associated with pranayama. They are viewed as the higher Yogic practices mainly consisting of adopting certain psycho-physical body patterns along with control over respiration.
- **Shat-karmas** are detoxification procedures, that help to remove the toxins accumulated in the body and are clinical in nature.

INTRODUCTION TO YOGA DIET AND ITS RELEVANCE AND IMPORTANCE IN YOGA SADHANA:

Shrimadbhagvadgita Classifies three types of Yogic Diet -

The ancient yogis have characterized Aahara (Diet) into three qualities namely, Sattvic, Rajasic, and Tamasic. In this way, each individual has three different qualities, which reflect or decide the nature of an individual.

The yogic system categorizes Aahara(diet) into three groups:

1- Sattvic Food -

- Sattvic foods are those which purify the body and calm the mind.
- Cooked food that is consumed within 3-4 hours can be considered sattvic.
- Examples – Fresh fruits, green leafy vegetables, grains, fresh milk, herbs, Natural sweeteners like honey (in small quantities), etc.

2. Rajasic Food -

- They stimulate the body and mind into action. In excess, these foods can cause hyperactivity, restlessness, anger, sleeplessness, etc.
- Overall tasty or aggressive foods are Rajasic.
- Examples – Spicy foods, tea, coffee, fried food, garlic, onion, mushrooms, etc.

3. Tamasic Food -

- Tamasic foods are those that dull the mind and bring about confusion and disorientation it makes a person lazy.
- Stale or reheated food, oily or heavy food, and food containing artificial preservatives fall under this category.
- *Examples* – Non-vegetarian diet, stale food, excessive intake of fats, flesh food, sugary food, fermented food, burnt food, alcohol, Reheated food etc.

According to Hathapradipika, Sage Svatmarama has given some rules related to food which are as follows:

Apathya / Un-Wholesome food (non-nutritious food): *(H.P-Lesson I, Sutra-59 and 60)*

The foods which are restricted for the yogis are: Eating food which is bitter, sour, salty or hot, oily food, Alcohol, flesh food, reheated food, curds, butter, oil-cakes, garlic, onion, etc are said to be bad for a Hatha yogi or yogic sadhana, these are Apathya foods.

Pathya /Wholesome food: (nutritious food): *(H.P- Lesson I, Sutra-62)*

The most helpful foods for the yogis are: wheat, rice, pulses such as green gram(Mung), black gram(urad), horse gram(channa), dry ginger, honey, Cucumber, milk, ghee, green leafy vegetables, etc, can be eaten which are good for the eyes especially- Bathua and Chaulai.

Maharshi Gheranda prescribed some rules regarding the quantity of food to be taken -

Sage Gheranda has prescribed rules regarding the quantity of food to be taken. It is said that not too much food should be eaten. The rule for food intake is that half (50%) of the stomach should be filled with food, one quarter(25%) should be filled with water and the remaining one quarter(25%) should be left empty for the circulation of air. Eating until the stomach is full is prohibited. Thus, physical health is maintained by consuming food that causes no discomfort or stomach problems.

Plan of Yogic diet-

• It is said that yoga must not be performed soon after having food, nor when one is tremendously eager; before starting the yoga, some amount of milk and ghee should be taken.

Effect of Mitahara (Yogic diet)

• In the yogic eating schedule, it is standard to start the day with a glass of warm water only. This cleans the body and helps to get rid of harmful

toxins. By the method of standard detoxification, organs in the body can work well, because of which the body is without diseases.

• The satvik diet keeps one genuinely fit, it is an eating habit that adjusts the body, mind, and soul, subsequently bringing energy into the life of a person.

• Sattvic diet includes green leafy vegetables, fruits, and sprouts, etc. Accordingly, it doesn't take a lot of hard work for the stomach-related system to process the food; the final result of which is a proper bowel movement, clean and shiny skin, etc.

• Sattvic nourishments include milk, ghee, coconut oil, sprouted seeds, etc. These make the food tasty. In addition, the good fats in the diet help in keeping our mind and memory healthy and sharp respectively.

DINCHARYA AND RITUCHARYA WITH RESPECT OF YOGIC LIFESTYLE:

Dincharya:

Every morning is the beginning period of human life. Lotus blossoms in the morning, birds sing melodious songs, and new consciousness starts appearing in the universe, even though it has been said in the Vedas that many intellects are awakened in the morning. By getting up in the morning, the body blossoms like a lotus, after getting up in the morning, one should meditate on God, self-realization, and salutations to Mother Earth.

Daily routine rules to be followed:

1- This sadhana is done as soon as the eyes are opened in the morning that this visible world ends as soon as one sleeps at night. As soon as you wake up, first sit down with a cross, keep both your hands on the dock, then take a long deep breath with pleasure.

2- Ushapan should be done before going to the toilet, so drink lukewarm water, which also cures indigestion of dinner.

Having a bowel movement before sunrise gives long lived, the Indian method of sitting in the toilet is the best. By sitting with emphasis on the right leg, defecation comes openly, those who do not take care of excretion of stool, disorders start arising in their body, every day a person should go to defecation twice in the morning and in the evening.

3- Neem's stick are said to be the best for cleaning teeth, the stick of neem do not cause worms in the teeth, the bad smell of the mouth, dental plaque etc are cleaned.

4. Oil should be massaged daily which cures vaat disorders, old age, tiredness and makes the body firm. Among the oils, coconut oil in the summer and sesame and mustard oil in winter are considered good for massage.

5. Exercise should be done after the massage, due to exercise, lightness in the body, power to act, stability in the body, increases the

strength of the body to bear the pain, destruction of body disorders and increases of metabolism.

6. One should take a bath after some time of exercise, while bathing, water should be poured upon the head first, by doing this the heat of the brain goes out from the feet, those who wash their feet first, their heat goes into the head. After soaking up the head, the body parts should be washed, taking bath purifies the body, the tiny pores are opened, and the mind becomes happy after removing laziness, sleep, tiredness, etc.

7. Clean clothes should be worn after a bath, clean clothes prolong life, removes negativity, gives happiness, and makes one worthy to sit among noble people.

8. Food should be taken after a bath, one should always consume beneficial substances, that is, food which is digestible which is easily digested. Food should be taken only as much as is necessary for our body. While having a meal, keep in mind that should have to chew the food properly, neither talk nor do any kind of work, etc.

9. Food should be taken only two times, the first meal should be taken before 12 noon and the second by 7 pm, food should be eaten only when you are hungry, and eating without hunger causes health-related disorders.

10. It is difficult to determine the rules regarding how long one should sleep. A newborn baby sleeps for about 22 hours during the day and night. A child of 2 years sleeps for 14 hours. Young people must sleep for 6 to 7 hours, due to less sleep, fatigue remains in the body.

Ritucharya:

The normal rules regarding the seasons are very clear. It is said that yogic practices should not be commenced during summer, monsoon and winter. That is, when the temperature is extremely hot or extremely cold, or during the rains when the weather fluctuates from cold to hot. Gage Gheranda warns that if the practices are begun during this period, disease will manifest. Disease do manifest during this period if

yogic practices are undertaken, particularly in the case of pranayama. If the weather is disregarded when commencing the practices, then due to the heat that is generated, boils, fever, the common cold, etc., tend to develop.

Yoga practices should be commenced during spring and autumn, then the Yogi attains perfection and disease are removed. It is essential for the body to be able to adjust to, and be in harmony with the changes that take place internally as a result of yogic practices otherwise problems will arise. If yogic practices are begun when the weather is right, the body, environment and atmosphere are also favourable, and one can bear with the changes taking place in the body and mind. Tolerance also increases, and so this change has a positive effect. If there is no tolerance, there will be a negative effect.

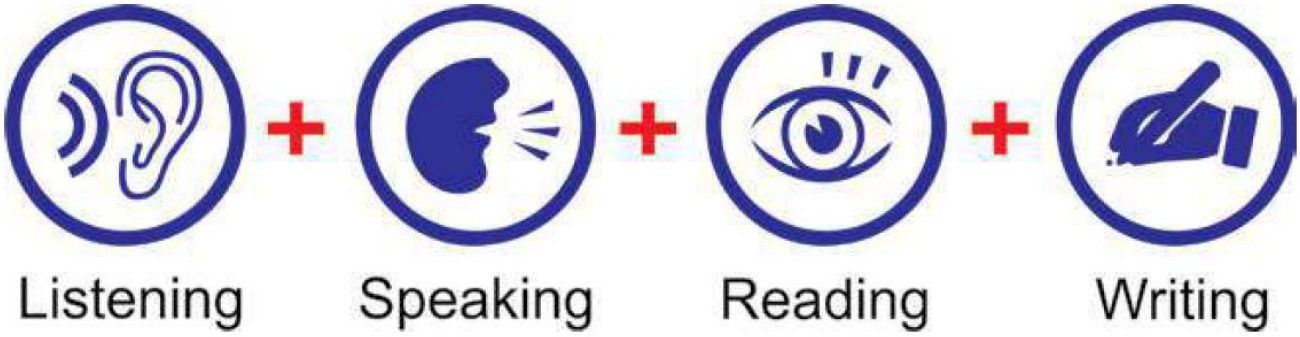

PART-A: EMPLOYABILITY SKILLS

S. No.	Units
1.	Unit 1: Communication Skills-III
2.	Unit 2: Self-Management Skills-III
3.	Unit 3: Information and Communication Technology Skills-III
4.	Unit 4: Entrepreneurial Skills-III
5.	Unit 5: Green Skills-III

Unit 1: Communication Skills – III

What is Communication?

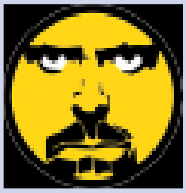

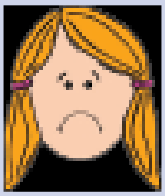

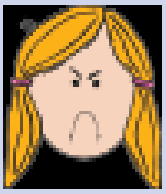

- Communication is a two-way process through which information or message is exchanged between individuals using language, symbols, signs or behavior.
- Speaking, Listening, Reading and Writing are the parts of communication, which help us to understand others. To learn a language, one needs to develop four key skills, namely Listening, Speaking, Reading and Writing.

Speaking more than one language can help a person communicate well with people around the world.

Methods of Communication:

Category	Verbal Communication	Non-verbal Communication	Visual Communication
Meaning	Verbal communication is the use of voice or language to convey information to the target audience.	Nonverbal communication uses our body language activity, gestures and facial expressions to convey information to the target audience.	Visual communication refers to the use of visual actions and activities for conveying information to the target audience. Which involves sending and understanding messages only through images or pictures.
Examples:	1- Face-to-face communication like group discussion, talking to family members at home, etc. 2- Talking on a phone. 3- Communication in writing is also an example of verbal communication. Ex- Communication in a messages, Writing a letter.	1- Body language 2- Eye contact 3- Facial expressions 4- Gestures(thumb up and down)	1- Images, videos, charts, drawings, banners, sketches etc. 2- Social Media Graphics and posts 3- Websites 4- Office presentations

Aggressive	Passive/Submissive	Passive-Aggressive	Assertive
			
1- Over confidence. 2- Rude and arrogant way of communication. 3- Winning at any cost. 4- Not respecting others. 5- Not caring about other's Views or needs. 6- Ignoring or insulting others. 7- Shouting, using strong language, and not listening to others.	1- Low confidence. 2- Shy and a person who speaks less. 3- Avoiding conflict. 4- Giving others control. 5- Losing self-respect. 6- Keeping quiet and not expressing yourself. 7- Accepting even wrong remarks from others. 8- Saying sorry even when it is not their mistake.	1- Over confidence. 2- Mixture of rude and shy Natured. 3- Trying to get your own way without taking responsibility. 4- Hurting yourself and others. 5- Indirect ways of showing anger, such as not doing a task and lying about it. 6- Talking wrong about others in their absence	1- Confidence, Polite, helpful communication. 2- Respecting others and maintaining self-respect. 3- Expressing yourself while 4- Listening to others point. 5- Understanding other's views and problems. 6- Disagreeing or saying 'no' without hurting others.

Communication styles:

Basic writing skills-

What is a Sentence?

- A Sentence is a group of words that makes complete sense by itself.
- We use sentences when we speak, read and write.

- All sentences begin with a capital letter and end with a full stop (.) question marks (?) or an exclamation mark (!) at the end, depending on what the sentence is conveying.

Examples-

My book is on the table.

The theatre is near my house.

What is your name?

Where are you going?

How beautiful she is!

How wonderful the painting is!

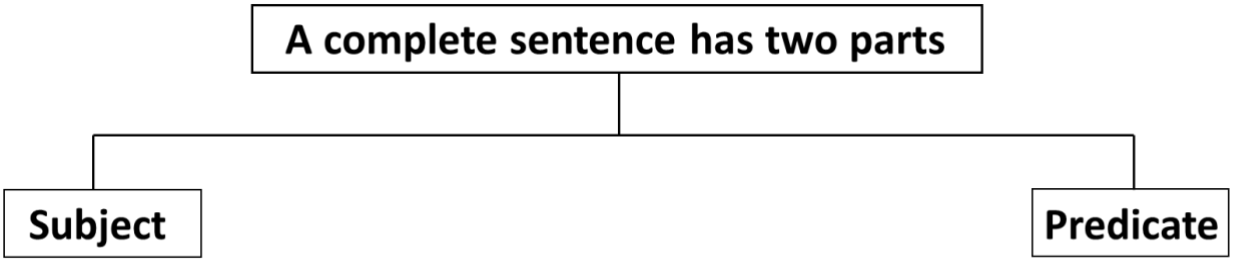

Kinds of Sentences:

There are four kinds of sentences-

	Form	Function	Can be positive or negative	Final Punctuation
1.	**Declarative**	**Statement**: It tells us something. They give us information.	Positive: I like coffee. Negative: I do not like coffee.	**.**
2.	**Interrogative**	**Question**: It asks us something.	Positive: Why did you go? Negative: Why didn't you go?	**?**
3.	**Imperative**	**Command**: Imperative sentences give a command. It tells us to do something.	Positive: Stop! Close the door. Negative: Don't stop!	**!** Or**.**

4.	**Exclamative**	**Exclamation**: It expresses surprise/emotion	We won! What a funny story he told us!	**!**

Parts of Sentence:

People from all nations go to see the Eiffel Tower.

In this sentence, People from all nations is the naming part also called the Subject and the other parts of the sentence that is go to see the Eiffel Tower is the telling part also called the Predicate.

So, the subject tells whom or what the sentence is about and the predicate tells something about the subject.

Phrase:

A phrase is a group of words in a sentence that does not have a subject and a predicate pair.

A group of words that makes sense but not complete sense is called a phrase.

Example:

On the table

Under the table

After long time

Full of red roses

Beautiful dress

Morning walk

Study of language

Phrases

Parts of Speech

All words in the English language belong to a word class called the **parts of speech.**

There are **eight** main **parts of speech** in the English language.

1- **Nouns** are words that refer to a **person, place, thing or idea**. They are **'naming words'**.

Example- "Reema wrote a letter." Both **Reema** and **letter** are nouns.

2- **Pronoun** is a word used in **place of a noun** or **replaces a noun**.

Example- "Reema wrote a letter. She is tired." **She** is used in place of the noun Reema.

3- **Verb** is a word that shows **action.**

Example- "Reema wrote a letter." **Wrote** is a verb. It tells what action Reema did.

4- **Adverb** is the part of speech that **adds more information** about a **verb** or how the work is going on.

Example- "Reema quickly wrote a letter." **Quickly** is an adverb. It tells us how Reema did the action (writing).

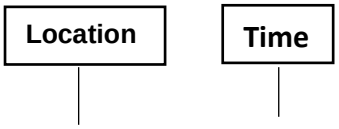

5- **Adjective** is a word that describes the **quality** of a **person**, **place**, **animal**, or **thing**.

Example- Rohan is a **smart** boy.

The **green** parrot is flying.

This is a **big** hall.

6- **Preposition** is the part of speech that shows **location**, **position**, **time**, or **direction**.

Example- We went **to** school **on** Monday.

The train is passing **through** the tunnel.

7- **Conjunction** is the part of speech that joins together groups of words of sentences.

Example- I like cats **and** dogs.

The sky is cloudy **but** it is not raining.

8- **Interjection** is the part of speech that shows **emotion**, **surprise**, or **emphasis.**

Example- **Ouch!** That hurts!

Hi! How are you?

Articles:

• The words ‘a’, ‘an’ and ‘the’ are known as articles.

• Articles are, generally, used before **nouns** and sometimes **adjectives.**

- ‘A’ is used before **singular** nouns that begin with a consonant sound. (all except those starting with a, e, i, o and u).

• ‘An’ is used before **singular** nouns that begin with a vowel sound (a, e, i, o, u) or a mute h sound.

• ‘The’ is used to refer to specific or particular words.

Example:

A book

A rat

An adult

An heiress

The sun

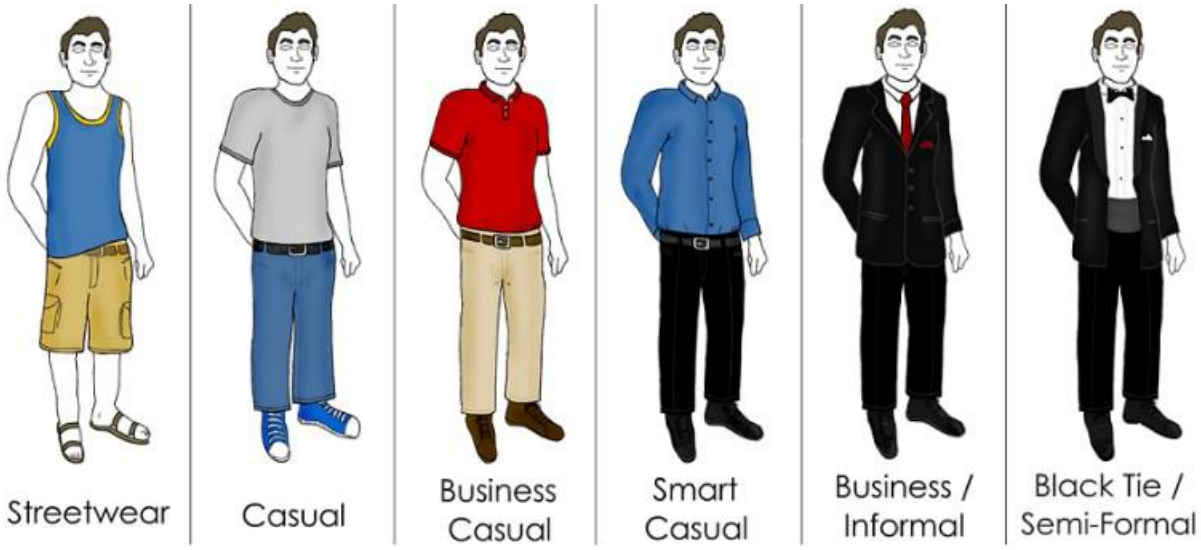

The earth

Unit 2: Self-management Skills – III

Describe the importance of dressing appropriately, looking decent and positive body language:

Dressing, appropriately, looking decent and positive body language all create a positive first impression. Dressing appropriately reflects the role that one plays. As a student studying in school, one is supposed to wear school uniform. Same uniform will be inappropriate if worn in a party or during family picnic or
in swimming pool. When one dresses appropriately and keeps oneself neat, he/she conforms to generally acceptable standards of respectable and decent looks. Looks, gestures and postures comprise body language. A positive body language uses respectful, decent, non-offensive and appropriate expressions and body movements.
Following points highlight the importance of dressing appropriately, looking decent and positive body language.

- Promotes self-respect
- Boosts self-confidence
- It's a step to overall improvement
- It shows your attention to detail
- Every expression leaves an impression
- Your attire speaks before your words
- Draws the right kind of attention and sends the right message

Describe the term Grooming:

Dressing refers to clothes you wear. Grooming is the process of making yourself look neat, tidy and clean. The way you dress, and groom can send a message that you are confident and smart. Grooming is important because it helps us to

- Look neat and clean.
- Feel confident about ourselves.
- Make a good impression of ourselves on others including customers.

Prepare a personal grooming checklist:

We have already seen the importance of well-groomed individuals. Following is the personal grooming checklist that you should strictly follow.

• Maintaining health by seeing a doctor when necessary.
• Maintaining health by eating a well-balanced diet.
• Maintaining health by using good posture.
• Bathing or showering every day.
• Shampooing the hair regularly.
• Styling hair in a neat (away from my face and off my collar) manner.
• Brushing teeth regularly (at least twice daily).
• Trimming fingernails and keeping them clean.
• Wearing properly fitted clothes.
• Donning clean and ironed clothes.
• Changing socks and stockings daily to reduce foot smell.
• Avoid wearing jewelry or perfume with a uniform.

Self-Exploration Techniques:

Every now and then we examine and analyze the goals we want to achieve in life and the necessary resources we need to realize them. Self-exploration refers to knowing one's potential by examining and analyzing intellectual and spiritual capacities. Self-exploration helps develop a clear understanding of self-interests, attitudes, skills, wants, and needs, which guide you to choose your profession for life. It also

helps in identifying the goal of life that we wish to pursue. Self-exploration journey is as beautiful as its destination.

Team Work:

Just imagine that there is a function in your house. All the family members come together, divide work amongst themselves and work in small groups to make sure the function is a success. The success or failure of any activity depends on the way the team coordinates and works.
A team is a group of people working together toward achieving a common goal. Every team has a set of goals to achieve. The process of working together in a group is TEAMWORK.

Let's look at another example of teamwork

Every individual in a team plays an important role. Each individual in the team is called a team member. Every team member needs to understand his or her role in the team.

Meaning and importance of time management:

Time management is the process of planning and exercising control of time spent on various activities to increase efficiency and effectiveness. Time as a resource is the same for everyone. It is up to us to make the best use of this resource.

Following are the set of activities we need to take up for time management

Setting and prioritizing goals:

We have the option to steer our life or to let it run on its own. If we take charge of our life and our goals, we will be able to lead meaningful life. For leading a successful life, we should create our targets and aims. This can only be achieved if we are able to set and prioritize our daily activities, which shall be aligned with our goals.

Creating a schedule, making lists of tasks

This should be our first to-do thing every morning. A list of tasks shall be prioritized for making our day worthwhile.

Breaking large tasks into smaller tasks

We should break large tasks into smaller ones. Smaller tasks can be finished in lesser time. When we will finish few small tasks, we feel motivated to complete others too.

Unit 3: Information & Communication Technology – III

Introduction to word Processing:

A **word processor** is software that helps you type and work with text on a computer. You can create a document like a letter, memo, and newsletter and save it in word processor. The main advantage of creating a document is a word processor is that a document can always be opened and edited. You can also format it, check and correct spellings and grammatical errors in it, insert drawings, images, and pictures, apply page borders, and also print it.

Software packages for word processing-

A variety of word processors such as Microsoft Word, Apache OpenOffice Writer, and Star Office have been developed to make text input and editing on the computer easy. An online word-processing application such as Google Docs (part of Google Drive), is also becoming popular.

Let us learn about Apache Open Office Writer, a popular Open source word processor.

Apache OpenOffice:

Apache OpenOffice is a free and open-source software that has been developed by the Apache Software Foundation. Apache OpenOffice can be downloaded for free from:
http://www.openoffice.org/
It is available in a number of languages. It can also read/write files created in other Office software packages.
The Apache OpenOffice package contains the following:
• OpenOffice Writer (Word processor)
• OpenOffice Calc (Spreadsheet)
• OpenOffice Impress (Presentation)

• OpenOffice Base (Database Management System)
• OpenOffice Draw (Graphics)
• OpenOffice Math (Equation Editor)

OPENING AND EXITING WORD PROCESSOR:

Apache OpenOffice Writer is a word processor program, which is equivalent to MS Word. It is used for creating, editing, formatting, and printing text documents. You can include pictures, charts, tables, and can save the document in various formats.

Opening a Document

To open an already saved document in OpenOffice Writer:
1. Click the **Open** option from the **File** menu.

Or

Click the **Open (Fig 2)** button on the **Standard** bar.
Or
Press **Ctrl + O.**
2. The **Open dialog** box appears.
3. Select the Drive and the folder.
4. Select the file and click **Open** button.

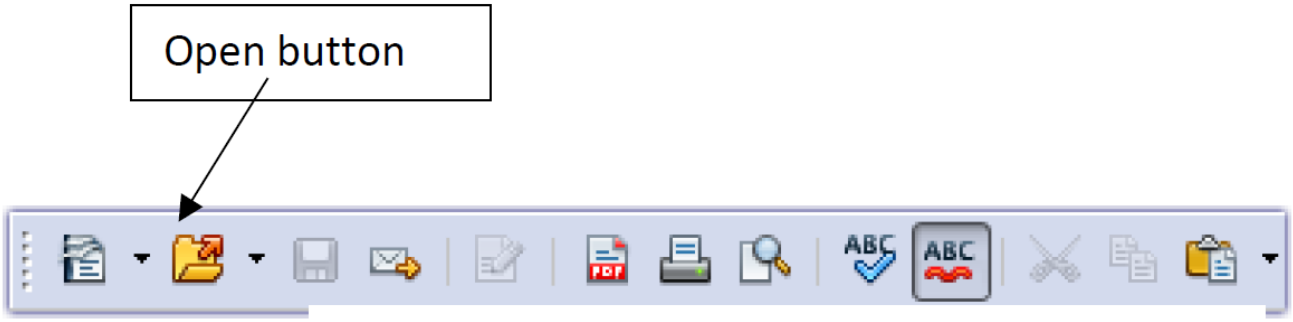

Fig 2 Open button on Standard bar

Closing a Document:

To close an open document, click the **Close** option from the **File menu.**

Exit Writer:

To exit Writer, click the **Exit** option from the **File** menu.

CREATING A NEW DOCUMENT:

To create a new text document in OpenOffice Writer:

1. Select **File** ➢**New** ➢**Text Document**.(**Fig 3**)

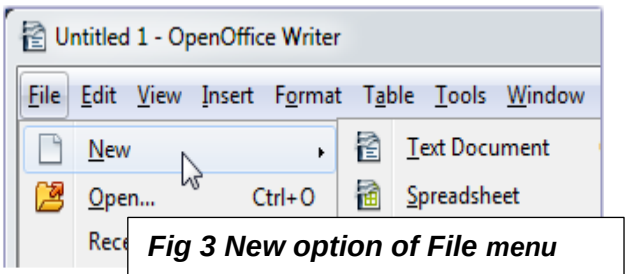

Fig 3 New option of File menu

Or

Click **New** button on the **Standard**

Toolbar and select the desired option to create a new text document.

Or

You can also press **Ctrl + N** on the keyboard to create a new document.

EDITING TEXT:

As we already know that there are so many advantages of creating document in word processor. One of the main advantages is that we can make changes in the document whenever we want.
Editing means making changes into existing text.
But before editing or formatting the text, you may need to select the text. Selection of text can be done with the keyboard or the mouse.
The selected text gets highlighted with blue color.
OpenOffice Writer features various tools to edit the text in a document.

Wrapping Text:

Text wrapping is a feature that automatically starts a new line when a word in a sequence reaches the border of a picture, a text box, or the

margin. There are different options to wrap text around the image. The steps are:

1. Select the image.
2. Select the **Wrap option** from the **Format** menu.
3. Select the desired option.

FONT SIZE, TYPE, AND FACE:

Another advantage of a word processor is that we can change the appearance of the text by changing the size, color, and style. Formatting is the process of changing the appearance of the text in a document through the use of various fonts, font colors, font sizes, etc. Some settings are pre-defined in Writer. These pre-defined settings in the software are called **default settings**. You can also make changes in the default settings.

HEADER AND FOOTER:

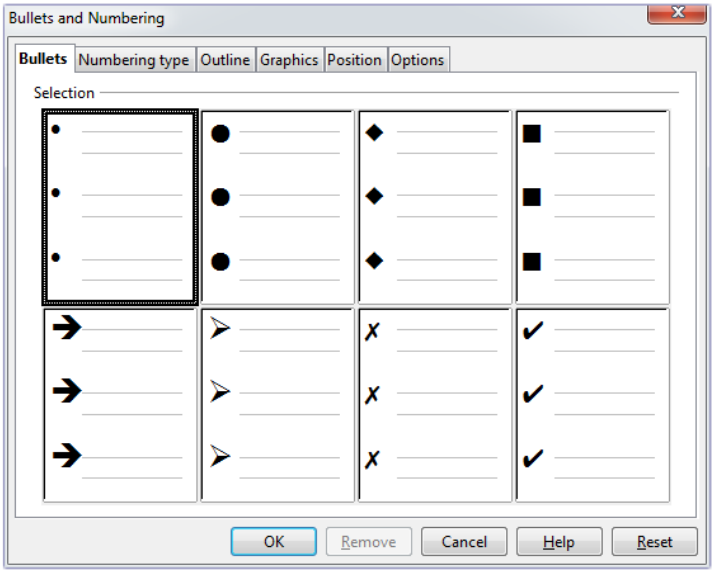

The header is the text that is printed at the top of each page (in the top margin) in a document. **Footer** is printed at the bottom of each page (in the bottom margin).

Header and Footers provide additional information about the document, like, date, page number, etc.

AUTOCORRECT:

One of the main advantages of creating a document in the word processor is that we easily come to know about our spelling and grammatical mistakes done while typing. These can be easily corrected using the options available in word processor. While typing in an OpenOffice Writer document you will notice red or blue wavy lines under the text. A red wavy line indicates a misspelled word and a wavy line indicates a grammatical mistake.

NUMBERING AND BULLET:

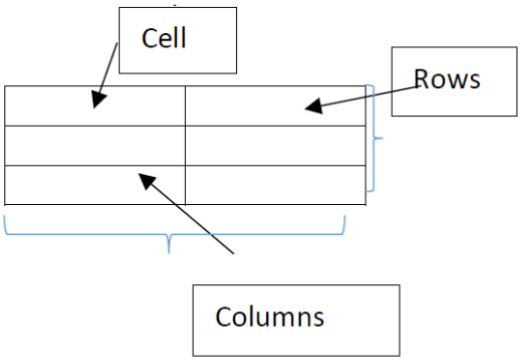

A list is a way of organizing items in a document. This helps the reader to understand the key points easily. Lists can be created for step-by-step instructions to a series of points. Word processor has the option to create numbered or bulleted lists.

A numbered list is created if the order of items is very important. A numbered list is also called an ordered list. You can use different numbering styles – numbers, roman numbers, or alphabets to mark the items in a numbered list.

CREATING TABLE

Tables in a document can be used to present information. It is easier to read or present information in a tabular format. A table is arrangement of data arranged in rows and columns. Word processor uses tables to place information into rows and columns. Your class Time Table is an example of a table.

A column is a vertical series of cells in a table.

A row is a horizontal series of cells in a table.

The intersection of row and column forms a rectangular box called a cell.

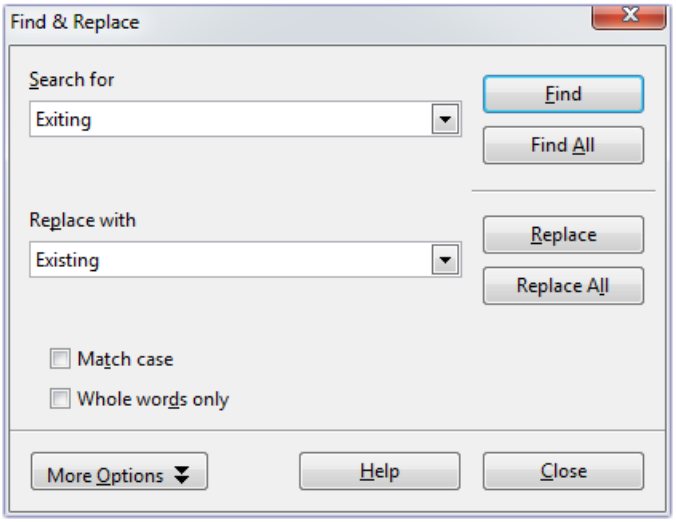

Tables can be created in OpenOffice Writer in any one of the following ways:

- Using the Table button
- Using the Table menu

Finding and Replacing Text:

You can search for a given word and replace it with another word in a document. The steps to find and replace a word or text are:

1. Select **Find & Replace** option from the **Edit** menu
2. The **Find & Replace** dialog box is displayed. (**Fig 33**)
3. Type the word to be searched in the **Search for** box.
4. In the **Replace with** box, type the word or text with which you want to replace the word or text typed in the **Search for** box.
5. Click the **Replace** button to replace the word one by one, or click the **Replace All** button to replace the word at all locations in the document.

6. When all the occurrences of the word are replaced, a message box will appear. Click **No** to discontinue and close the **Find & Replace** dialog box.

PAGE NUMBERING

You can add page numbers in the header or footer area. The steps are.

1. Click in the header or footer area.
2. Select **Insert➢ Fields ➢ Page Number**.

PRINTING DOCUMENT

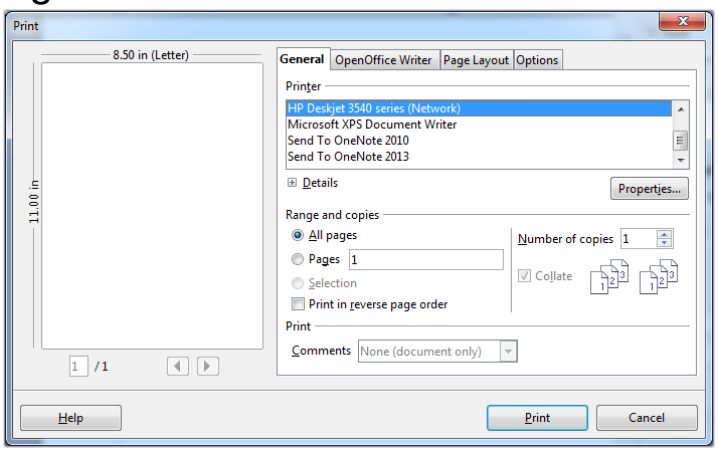

To print a document, do the following:

1. Select **Print option** from **File** menu.

Or

Click the **Print**  button on the **Standard** bar.

3. The **Print** dialog box appears.

a. Select the printer.

b. Specify the range of pages to be printed.

c. Specify the number of copies to be printed.
d. Click the **Print** button.

SAVING A DOCUMENT IN DIFFERENT FORMATS:

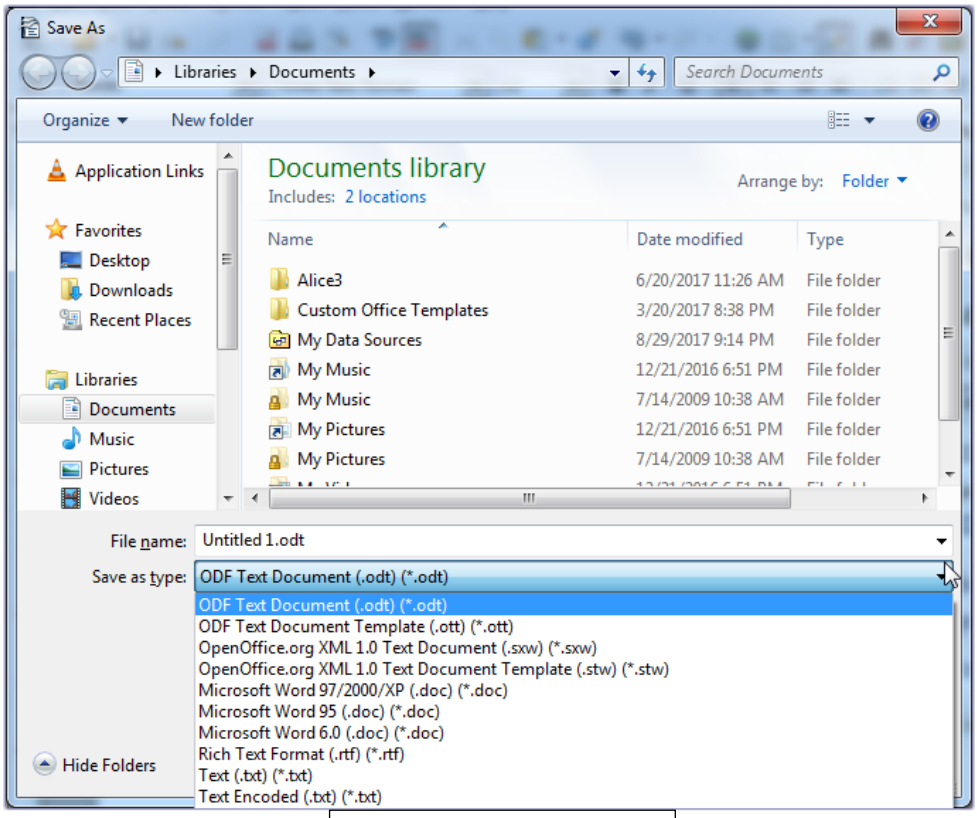

You have already learnt how to save a document in OpenOffice Writer. If you want to save a file in a different format other than the default format .odt of OpenOffice Writer. The Steps are:

1. Select **Save As** option of **File** menu.
2. The **Save As** dialog box appears.

a. Select the **File** type from the **Save as type** drop-down list.

b. Type the filename.

c. Click **Save** button.

Save As dialog box

Unit 4: Entrepreneurial Skills – III

Introduction:

Entrepreneurship is the process of running a business using a new idea or in a different way, which ultimately helps the buyer or the customer. The new ideas in a business can be in the form of a unique product or service. A different way of doing business makes an entrepreneur different. A traditional business person runs his venture like most others. Whereas an entrepreneur uses unique ways of doing business — be it reaching out to the customers through marketing and advertising, new ideas or new ways to meet customer needs or running the operations in a more efficient way.

Entrepreneur:

An entrepreneur is a person who tries to meet needs of a customer through new ideas or ways of doing business and makes profit in return.

Entrepreneurship:

Entrepreneurship is a process of developing a business plan, launching and running a business using innovation to meet customer needs and to make a profit.

Values of an Entrepreneur :

Here are some values which make an entrepreneur successful are:

Confidence:

Confidence means to believe in one's self and one's approach. Being confident helps an entrepreneur to take the first step of starting a new business and then trying new things to grow the business. It pushes the entrepreneur to keep going even if there are failures. Confidence also encourages an entrepreneur to go to customers and ask them for

their feedback about the product or services. The feedback helps the entrepreneur to keep improving and growing the business.

Independence:

Independence means one's ability to work alone and have the confidence to make one's own decisions. The responsibility of deciding what work needs to be done and how it can be done is made by the entrepreneur.

An entrepreneur is her or his own boss and has to be self-motivated to set goals and follow them. He or she is also responsible for motivating others to work to achieve the goals of the business and keep a check on how the business is performing on a day-to-day basis.

Solidity:

Solidity means not to give up and keep going even when a difficult situation comes up. Running an enterprise, or a business involves many failures. An entrepreneur is responsible to overcome these failures, learn from them and keep going, no matter what happens. The entrepreneur has to stay positive and motivated when things get difficult.

Open-mindedness:

Open-mindedness means to be open to trying new things and being open to other's feedback. In the process of starting and growing the business, an entrepreneur tries many different things. They will often have to consult others, such as market experts, peers and colleagues for information and insights. During this process, it is important to keep an open-mind and allow for new thoughts and ideas to come your way.

Respect for work:

An entrepreneur cannot succeed if he/she does not respect and values their work. It is important for an entrepreneur to work hard and keep trying different alternatives to sustain and grow their venture.

Outstanding performance:

Entrepreneurs are always ready to face and resolve the challenges they set for themselves certain standards of outstanding performance

and excellence and can deal with unexpected obstacles with confidence.

Attitude of an Entrepreneur:

Entrepreneurs often exhibit certain attitudes. Similarly, some attributes related to one's attitude are needed to have the right mindset for achieving entrepreneurial success. Some of these are as follows:

Use imagination:

In entrepreneurship, use of imagination and creativity provides a structure to entrepreneurs to think out of the box.

Take moderate risks:

Moderate risk takers are those entrepreneurs who are often characterized as willing to assume a moderate amount of risk in business.

Enjoy freedom of decision making and action:

If an entrepreneur does not decide to take a particular action, the action will not happen. Entrepreneurs have to decide to do something and then do that. This is the logical process of how they can take action.

Look for economic opportunities:

The trends in industries and businesses keep changing. In various situations, entrepreneurs can feel uncomfortable when implementing a needed change in people, technology, product, mission, etc. An entrepreneur has to step out of his or her comfort zone and focus on pursuing and trying different economic opportunities. They must continuously.

Analyze situations and plan actions:

Part of having an entrepreneurial attitude is to assess and analyze situations. Entrepreneurs must not be afraid to plan and take real action. Planning and executing actions are something that can lead to successful and timely business activity.

Accept feedback and criticism positively:

Constructive feedback can prove to be extremely valuable for entrepreneurs. Many times, customers, industry partners, consultants etc. might criticize the idea or a certain action. An entrepreneur must always be open to this and take it positively rather than getting demotivated or negative about it.

Unit 5: Green Skills – III

Sectors of Green Economy:

A green economy is one which promotes development while making sure that the environment is protected. The term 'Green Economy' was first coined in a 1989 report for the Government of the United Kingdom by a group of leading environmental economists, titled "Blueprint for a Green Economy".

Every economy has many sectors. A sector can be described as a part or a function of the economy. For example, agriculture, automotive, construction, transportation and healthcare are different sectors of economy.

To make the economy 'green' or environmental friendly there are some sectors where major changes can be made.

Important Sectors of Green Economy-

Waste Management:

Throwing something away means losing the chance to reuse materials and can lead to land, air and water pollution.

What can we do?

- Reduce, reuse and recycle before throwing away things. Separate the waste substances so that some products can be recycled and food waste can be composted.

Water Management:

Water is one of our most important resources. Billions of people worldwide lack access to clean drinking water or improved sanitation services – and population growth is making the problem more serious.

What can we do?

- Use water wisely
- Turn off the tap when you are not using it
- Get leaking taps and pipes fixed immediately

Transport Management:

The transport sector consumes maximum petrol and diesel and causes a lot of pollution.

The transport sector of a green economy aims at

- Using cleaner fuels like electricity for vehicles.
- Providing public transport, promoting cycling, etc., to discourage use of cars.

What can we do?

- Use public transport like buses or trains
- Walk or cycle when possible
- Use electric (battery-operated) vehicles if possible

Construction:

Construction and buildings affect global resources and climate.

Use of sand and stones causes destruction of river beds and mountains. These activities cause landslides, earthquakes and destruction due to flooding.

Construction activities also cause air pollution and breathing problems.

What can we do?

- Energy-efficient or green buildings save electricity and water and use clean energy like solar and wind energy.
- We need to use cleaner energy in our buildings and avoid wastage of energy.

- If a large scale construction project is causing pollution we should inform the local authorities about them.

Agriculture:

Agriculture refers to growing crops for our food. It is the largest part of our economy and the most important because it provides us with food. Agriculture may harm the environment by overusing land resources, cutting forests and polluting air, water and land by using harmful chemical fertilizers and pesticides

What can we do?

- Support local, organic and natural farming (farming without use of harmful fertilizers and pesticides)
- Grow our own vegetables, if possible
- Eat in-season and locally produced food

Policy Initiatives for Green Economy in India

WILDLIFE PROTECTION ACT, 1972 - The **Wildlife Protection Act, 1972** is an Act of the Parliament of India for protection of plants and animal species.

THE WATER PREVENTION AND CONTROL OF POLLUTION ACT, 1974, amended 1988-

Water (Prevention & Control of Pollution) Act, 1974 is a comprehensive low that regulates agencies responsible for checking on water pollution and ambit of pollution control boards both at the centre and states. The Water (Prevention & Control of Pollution) Act, 1974 was adopted by the Indian parliament with the aim of prevention and control of Water Pollution in India. The act was amended in 1988 to clarify the ambiguities and to vest more powers in Pollution Control Board.

FOREST CONSERVATION ACT, 1980 - The **Forest (Conservation Act, 1980** an Act of the Parliament of India to provide for the

conservation of forests. It was further amended in 1988. This law extends to the whole of India.

Stakeholders in Green Economy:

Any person with an interest or concern in something (business, policy, activity) is known as a stakeholder. Since the environment affects you and your actions affect the environment, you are an important stakeholder too!

Stakeholders in Green Economy:

Government	Non-Governmental Organisations (NGOs)	Business and Industry
 Governments and local authorities make and implement sustainable development laws, policies, strategies, standards, programs, agreements with other countries and actions.	 Many individual social workers and NGOs help the government and society in implementing actions required for a green economy.	 The success of green economy depends on the active participation of both — public and the private sectors. Companies need to follow responsible business practices and protect the environment.

Farmers

Farmers produce food and agricultural products for the whole country. They are one of the most important parts of an economy and society. They have a big role in the success of a green economy.

Women

Women form one-half of the population and have a big role in households, society and the economy. Sustainable development is possible only if we focus on women's rights making them participate fully in a green economy.

Workers and Trade Unions

The workers are a very important part of our economy. Green policies aim at providing them

- a decent life and decent work in a healthy environment.
- access to health, water and sanitation.
- access to education and skills training.

Scientific and Technological Community

All areas of sustainable development need science and technology. Scientists can explain problems of technology to governments and policy makers. They can also provide sustainable solutions to improve people's lives.

Children and Youth

The youth are both the present and the future of our economy. They can participate actively in the protection of the environment and the promotion of economic and social development.
